STAR WARS

The IG-227 *Hailfire*-class droid tank had been a mainstay of the InterGalactic Banking Clan's Collections and Security Division for some time before it made its battlefield debut on Geonosis. In the opening battle of the Clone Wars, the Hailfire droid was an explosive success, mowing down swathes of clone troopers and blowing apart hulking great AT-TE's with a single rocket.

"WE MUST SEND ALL AVAILABLE DROIDS INTO BATTLE."

NUTE GUNRAY

IG-227 *HAILFIRE*-CLASS DROID TANK

RAIN OF FIRE

From its single, sinister glowing red eye to its explosive speed and devastating weaponry, the Hailfire droid continued Haor Chall Engineering's philosophy of giving weapons feral, animalistic qualities. Although it performed well enough in early battles of the Clone Wars, fielding the Hailfire droid tank was not without issues.

The Hailfire droid tank was already in service to the InterGalactic Banking Clan a number of years before the creation of the Confederacy of Independent Systems and the outbreak of the Clone Wars. Only an organisation as monolithic and powerful as the IGBC could get away with the uses it put the Hailfire tank to – namely 'protecting its interests' by aggressively guarding its physical assets and personnel, as well as backing up forcible debt collection and repossessions. Despite criticism in the Senate, the Banking Clan was too rich, powerful and well-connected for any complaints to get past their highly paid lawyers. Even when a shipment of 144 Hailfire droids was intercepted on the way to the Separatist world of Praesitlyn shortly before the Battle of Geonosis, the Banking Clan was able to pass off these weapons of war as stolen property for which they were now grateful to be able to account.

Simple Solutions

As with other projects, when Haor Chall Engineering was contracted to create what became the Hailfire droid, it turned to its their partners at Baktoid Armour Workshop for some assistance. Certain components from Baktoid's Vulture-class droid starfighter (another co-production) made their way to the Hailfire droid, giving a familiar look to the small, cockpit-like command module. This contained a simple but self-aware integrated droid brain that used a single basic photoreceptor to scan its surroundings, but targets and a route through the battlefield were programmed, monitored and altered as required from a central control computer. Individual Hailfire droids could negotiate obstacles and defend themselves to a degree, but only until orders came from central command.

The Hailfire tank droid rolled into battle at a respectable 45km/h on two tracked hoop-like wheels mounted either side of the low-slung command module. The wheels, pitched inward at the bottom but able to 'flex' according to terrain, were powered by independent magpulse drives. This allowed the droid to start, stop and turn astonishingly quickly.

Heavy Firepower

Speed and manoeuvrability were the only 'shields' the droid had, and it made the most of them where possible. On either side of the command module were the mounts for the weapons pods. The standard load was two pods each of which carried 15 ground-to-air/ground-to-ground missiles. The lightly armoured droid had an under-slung retractable laser cannon for non-armoured targets. The Battle of Geonosis would show if all that was enough.

HAILFIRE PROVING GROUND

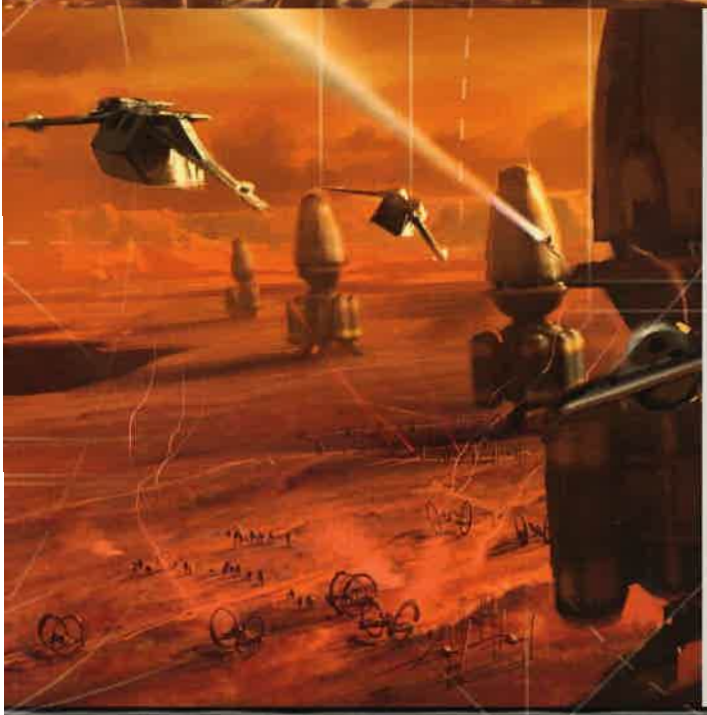
THE BATTLE OF GEONOSIS

Though the Hailfire tank was built for the InterGalactic Banking Clan, sufficient numbers of the droid were present on Geonosis to have a significant impact on the first battle of the Clone Wars.

Despite the presence of hundreds of thousands of battle droids in the Stalgasin Hive, the prospective members of the Confederacy of Independent Systems brought significant droid forces with them. These swelled the numbers of units guarding the meeting and key installations around the hive, including the huge cannon designed to bring down orbiting spacecraft. Among the additional droid forces were a large number of Hailfire tanks. These had already been supplied to a number of planets and systems that had declared for the Separatist cause, but only those with IGBC connections. As a result, and through its duties with the IGBC Collections and Security division, the Hailfire had seen limited action.

Against the Republic

Mace Windu and Luminara Unduli made the initial attack on the Geonosian forces, taking out the anti-orbital cannon to clear the way for the planetary assault. The Jedi dealt with Hailfire guard units, Luminara justly warning her fellow Jedi Master to beware of the incoming missiles. Not long after, the Battle of Geonosis erupted on the desert plains around the Stalgasin Hive. The Hailfire droids rolled into action, their missiles



streaking off to wipe out whole platoons of clone troops. Though the Republic's forces had been trained to deal with the tank droid, Hailfires still managed to destroy or cripple many AT-TE walkers and even knock down some of the LAAT/i gunships. However, the LAAT/i air superiority quickly began to tell, as the Hailfire droids were targeted as a priority and torn apart. The droid tanks proved particularly vulnerable while retreating for reloads, and their blasters were not hugely efficient against the massed ranks of clone troops. In the months to come, the Separatists suspended the Hailfire from active duty, until the advent of the 'refresh droid' that could reload it during combat.

SAN HILL

SLIPPERY CHAIRMAN OF THE INTERGALACTIC BANKING CLAN

One of the most important members of the Separatist Council, San Hill made three principal contributions to the Confederacy war effort – the funds and influence of the InterGalactic Banking Clan, the addition of the Hailfire droids to CIS forces, and the creation of General Grievous.

The InterGalactic Banking Clan had become a powerful organisation even before the Separatist Crisis that fractured the Old Republic in the years before the Clone Wars and the rise of the Empire. Many of the peoples of the galaxy who lived beyond the Core Worlds found that banking organisations openly discriminated against them, even going so far as to act in dishonest ways that would have been unthinkable in the Core. The IGBC was based on Muunilinst, a beautiful world in the Obtrexta sector of the Outer Rim Territories. An alliance of Muunilinst banking clans as well as other off-world financial organisations, the Banking Clan had become so powerful that it was they who underwrote and distributed the Galactic Credit Standard when it was first issued by the Republic. Unlike many Core-based institutions, the IGBC was utterly without prejudice. Credits were all that mattered and it gained many plaudits for a comparatively excellent customer service record.

Top of the Tree

San Hill became Chairman of the InterGalactic Banking Clan at a time in its history when the power the institution wielded had begun to corrupt. This was in no small part due to the erosion of law and order in the galaxy – as Coruscant and the Senate lost influence, the IGBC and other such institutions had to move to protect their own investments. Necessity became habit, habit became preference, and the result was that San Hill would be appointed to control of one of the largest military forces in the galaxy.

Investing in the Separatist Crisis

As one of those contacted early by Count Dooku, San Hill was a founding member of what would become the Separatist Council, the leaders of the Confederacy of

San Hill brought the Banking Clan into the Confederacy on a non-exclusive agreement – the IGBC made money from both sides in the Clone Wars.

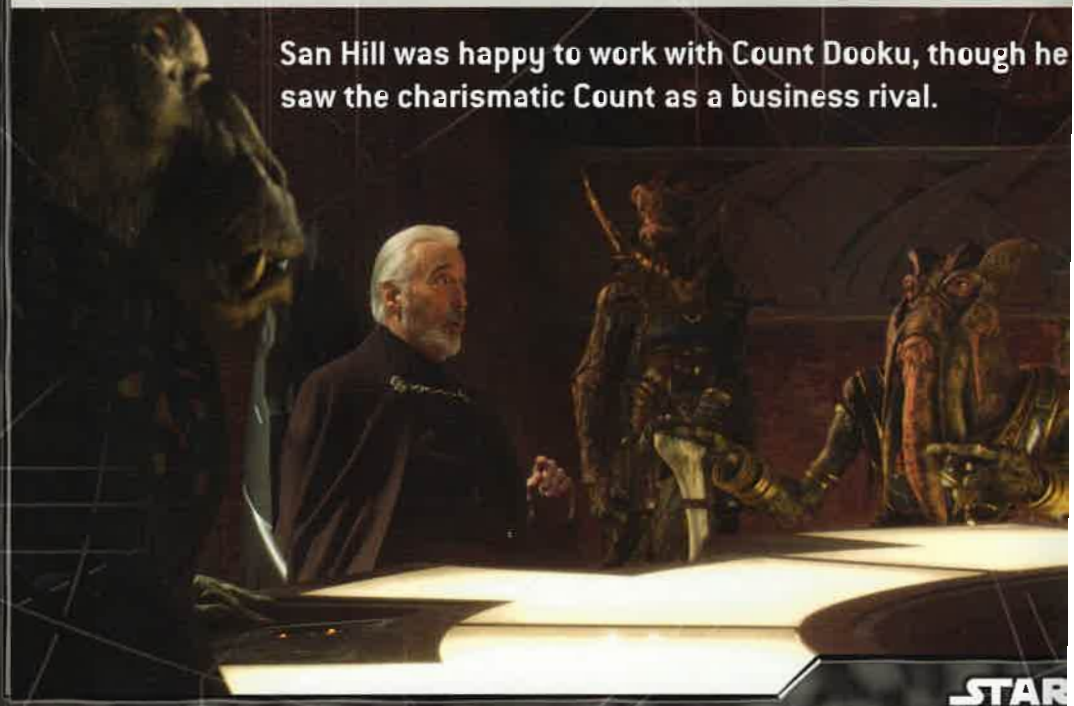
Independent Systems. The Banking Clan did well from the Separatist Crisis under Hill's leadership. As planets and whole systems left the Republic, the IGBC was uniquely placed, thanks to its access to insider information, to assist these emergent economies in minting their own currencies and investing in – or divesting themselves of – their own resources and capital. Unfortunately, the Collections and Security Division was also very active in those turbulent times, violently dissuading many from defaulting on their agreements with the InterGalactic Banking Clan.

Grievous

The talents of a Kaleesh warrior, Qymaen jai Sheelal, were recognised by San Hill as an investment opportunity. Hill offered to assist jai Sheelal's homeworld, Kalee, with its debts in return for the warlord becoming the senior enforcer of the Collections Division. The Kaleesh agreed, and jai Sheelal was phenomenally successful. However, Qymaen was later betrayed and blown up when he attempted to return to his beleaguered homeworld. Working with Count Dooku and the Geonosian Poggle the Lesser, San Hill had jai Sheelal transformed into the cyborg called Grievous. This was in part a plan of Hill's making, designed to counter



San Hill was happy to work with Count Dooku, though he saw the charismatic Count as a business rival.

Did You Know...?

With the death of San Hill and the end of the Clone Wars, the Empire was able to seize the assets of the InterGalactic Banking Clan and absorb their immense fortune into their own coffers.

Dooku's power, since Grievous was built to combat Jedi as well as to lead the proposed Confederacy of Independent Systems' droid armies.

The Clone Wars

On Geonosis, at a meeting hosted by Poggle the Lesser, Count Dooku drew together his supporters to formalise the Confederacy. Though Hill fully committed the Banking Clan's droid armies, he insisted that the agreement be non-exclusive on the part of the IGBC. They had every intention of maintaining their investments in the Republic, and of making as much money as possible from both sides. Initially, the plan went well. Hill negotiated financial deals with the criminal cartels of Aargau, and helped bring the resource-rich world of Ando over to the cause. However, the involvement of the Banking Clan with the Separatists was not to go unanswered. Muunilinst itself was assaulted by forces led by General Obi-Wan Kenobi and Anakin Skywalker. Hill was confident that he was protected, as the Jedi-hunter Durge was there to lead the defence. However, Muunilinst was a Republic victory and, though he was captured, only Hills' connections won him his freedom.

From then on, San Hill remained with the Separatist Council, moved from place to place by Dooku and General Grievous to keep them from falling into the hands of the Republic. Dooku was killed at the Battle of Coruscant, to Hill's satisfaction, but the IGBC Chairman did not live to capitalise on Dooku's death. He and the other members of the Council were executed on Mustafar when they were no longer required.

TECHNO-UNION TRANSPORT

THE *HARDCELL*-CLASS INTERSTELLAR TRANSPORT

A coalition of high-technology firms, the Skako-based Techno-Union represented some of the best and brightest companies in the galaxy. It is perhaps odd, then, that one of its high-status primary capital-class transports was distinctly low-tech and rather vulnerable.

The *Hardcell*-class light capital interstellar transport was an odd mixture of basic, rough-and-ready technology and luxury. At a little over 220m high, the cylindrical hull of the ships stood on three landing struts that were deployed from under the body. The titanium hull was protected by a basic shield, two small batteries of laser cannon and a clutch of missile launchers – clearly not meant for combat. The navicomputer was fast, however, and the hyperdrive was a respectable class 1.0 – far better than comparable basic transports. As though to balance this, the ships could only manage a painfully slow sublight speed. In short, if the crew was in trouble, going to hyperspace as quickly as possible was the only escape.

SMOKIN'!

The reason for the slow sublight speed was that, eschewing repulsorlift technology, the engines of the *Hardcell*-class consisted of six chemical rocket thrusters. These cacophonously loud, massively polluting engines were used for sublight flight, take-offs and landings and were renowned for the volume of fuel they guzzled. This seemed to be the basis for the high regard Techno-Union foremen had for the ships – as though the noisy, smoking landings were a mark of distinction. The passengers and crew who occupied the spacious living quarters in the nose cone were well looked after. Personal cabins were luxurious, and all featured zero-g sleeping compartments. As many Skakoans worked for the Techno-Union, the cabins were pressurised so they could remove their bulky suits. The advanced sensor and communications systems kept the foremen in touch with the Interstellar Stock Exchange – vital as the transports were used for Techno-Union business deals and tax collecting.

THE *HAILFIRE*-CLASS DROID TANK

DEADLY MOBILE MISSILE PLATFORM

Hailfire droids moved to pre-programmed coordinates that could be quickly updated from the central command computer. They were programmed to reassess their surroundings should they encounter unexpected conditions on their route. During combat, this led to an erratic, stop-start movement, not helped by the fact that the magpulse drives could accelerate the tank to its maximum speed alarmingly fast.

Rapid response

The tardy customer or unstable investor has good reason to fear late payments or forfeits on loans to the InterGalactic Banking Clan, what with its euphemistically named Collections and Security Division boasting thousands of Hailfire droids. The sequenced magpulse drives along the circumference of the hoop-wheels push the droids along at impressive speeds, and the missile launcher pods give the droids a very long reach. Variant versions exist to deal with differing market needs.

AAYLA SECURA

OUT OF DARKNESS

A Rutian Twi'lek, Aayla Secura became a Jedi Master through her prowess in battle and her abilities as a leader during the early campaigns of the Clone Wars. However, Secura's early training was touched by the dark side of the Force.

As a child, Aayla Secura was discovered on Ryloth quite by chance by a young Quinlan Vos, then Padawan of Jedi Master Tholme. Brought to the Temple on Coruscant, she eventually became the Padawan of Vos and the two worked very well together, undertaking a number of missions before disaster struck. During a mission to Ryloth, Aayla and Quinlan were captured trying to uncover a glitteryll spice smuggler. Heavily drugged, both Jedi suffered severe memory loss. Vos eventually recovered but, when he came to rescue Secura, she failed to recognise him. Fleeing Vos, she fell in with an Anzati Dark Jedi. After a long struggle, Secura was freed, recognising Quinlan as her master in mid-battle with him. Following the will of the Force, Vos let Secura complete her training with Master Tholme. Years later, they were reunited on Ord Mantell in a mission at the end of which saw Secura promoted to the rank of Jedi Knight.

General Secura

Aayla Secura was part of the team of 200 Jedi who fought in the Stalgasin Hive arena on Geonosis, surviving the battle to lead clone troops at the Battle of Geonosis. After a subsequent mission to Corellia, she encountered Quinlan Vos again a month later. Now a Jedi Master, Quinlan was working undercover posing as an ally of Count Dooku's. She and her former Master uncovered a plot to attack Kamino. Leaving Vos to continue his work, Secura defended the clone facilities in her Jedi starfighter during the Battle of Kamino, working with Master Kit Fisto. She and Fisto developed a relationship that was to stretch the boundaries of what the Jedi Code would allow. After surviving an attack by General Grievous at the Battle of Hypori, Secura was eventually promoted to Jedi Master. She went on to form an unsually close bond with her troops of the 327th Star Corps – so much so that they hesitated for an instant before granting Secura a quick death on Felucia following the issue of Order 66.

Behind the Scenes...

The Battle of Hypori, a humiliating defeat for the Republic, happened four months into the Clone Wars and saw the emergence of General Grievous. Though there had been rumours of a new Separatist commander, General Grievous chose Hypori to 'announce' his presence. Ki-Adi-Mundi, Shaak Ti, K'Kruhk and Aalya Secura barely survived the duel with Grievous.

GEONOSIS

RESCUE FROM THE PETRANAKI ARENA

When Jedi Master Obi-Wan Kenobi followed the clues from a failed assassination attempt on Senator Padmé Amidala, they led him eventually to the inhospitable world of Geonosis. Subsequent events would reshape the history of the galaxy according to the plans of Sith Lord Darth Sidious.

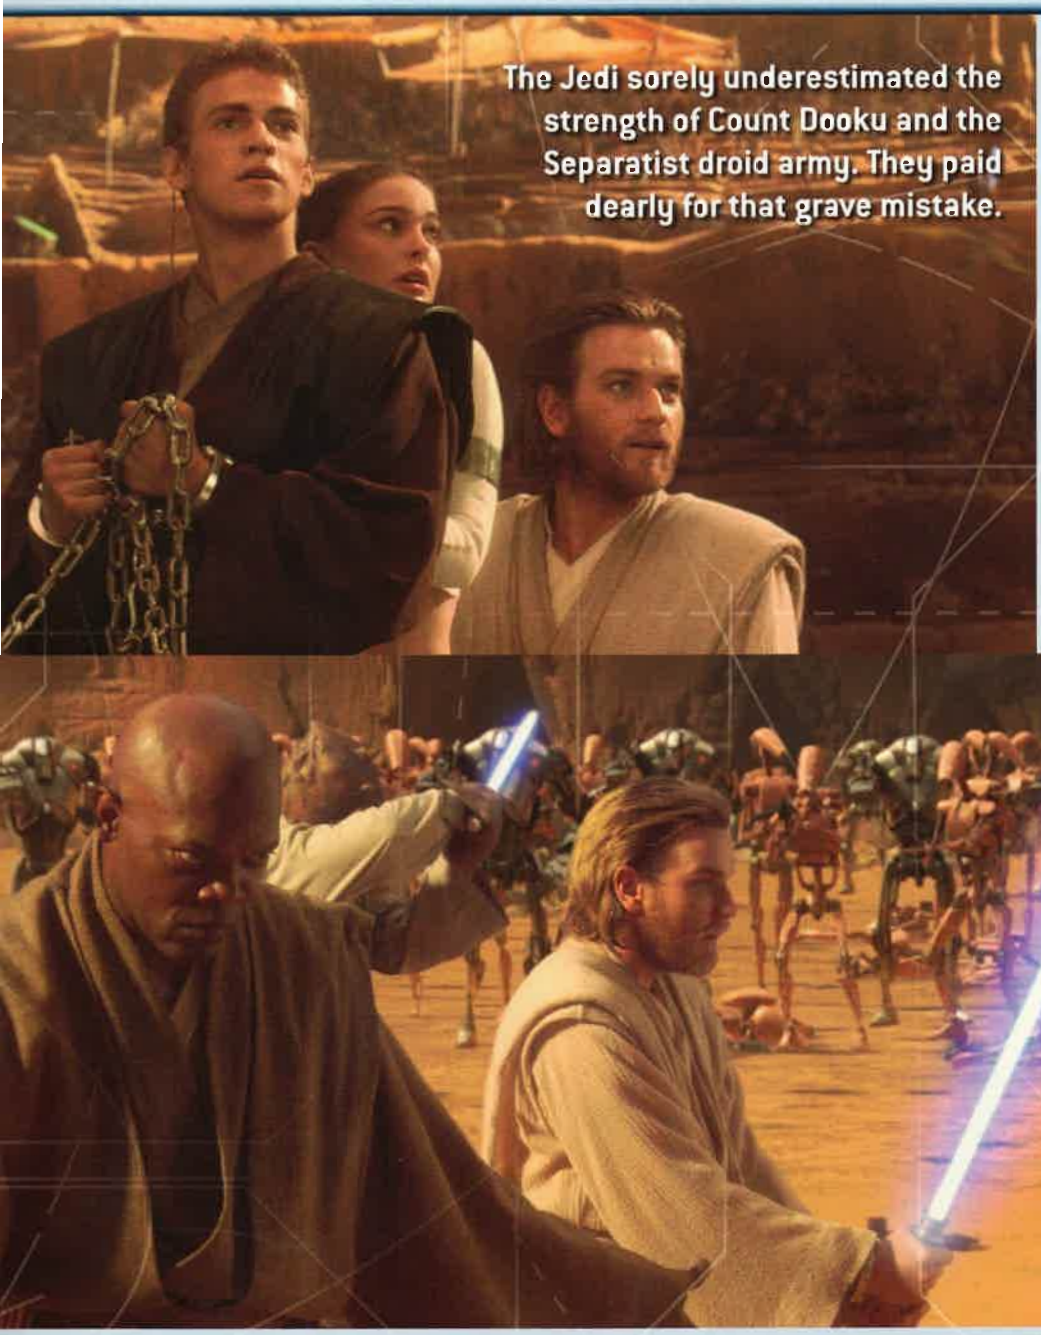
Obi-Wan overheard the end of the meeting that had formalised the Confederacy of Independent Systems, whose droid armies stood ready to attack the Republic. The meeting had taken place in the Stalgasin Hive, home to the insect-like Geonosians ruled by Archduke Poggle the Lesser. Foundries beneath the hive built hundreds of thousands of battle droids for the Confederacy. The Jedi Master knew the Republic needed to be alerted. He did so, but was captured even as he transmitted his warning. When Kenobi's Padawan Anakin went to rescue Obi-Wan along with Senator Amidala, they too were captured. To rescue the Jedi and the Senator, Master Mace Windu led a strike team of 212 Jedi, while Grand Master Yoda went to Kamino to collect an army of clone troopers with which to take on the droid armies of the Separatists.

Execution Arena

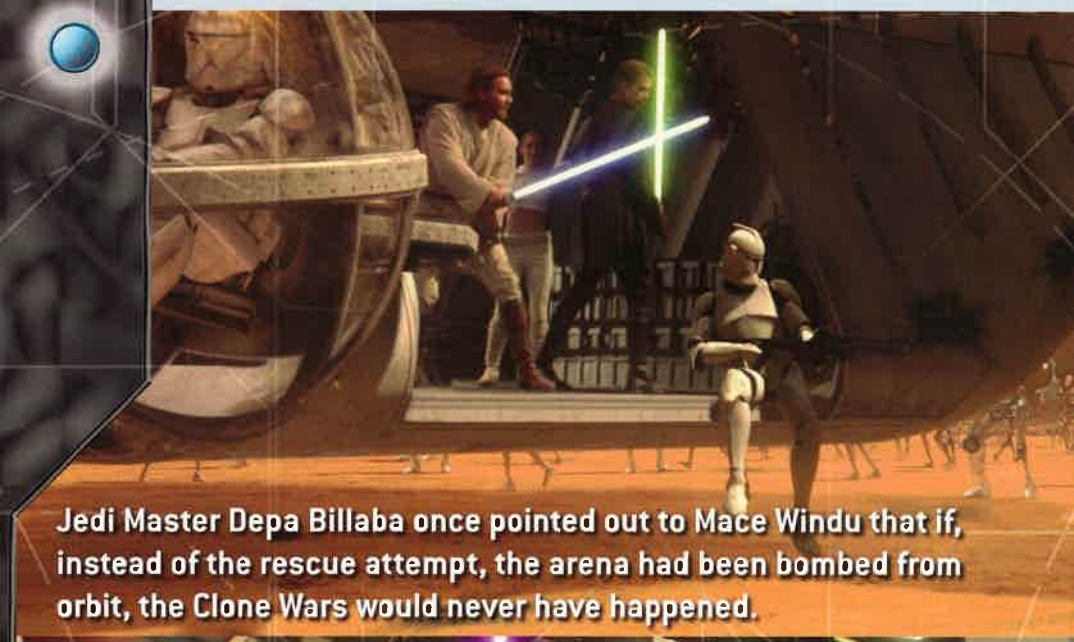
Obi-Wan, Anakin and Padmé were scheduled to be executed in the Petranaki arena – a massive structure carved out of a natural rock formation. There, the workers of the Stalgasin Hive went to be entertained by bloody battles and violent executions, their own miserable existences forgotten for a while as they watched the horrific spectacles staged by their rulers.

Bloody History

Even as the crowd bayed for blood, Windu's strike team quietly slipped into the network of tunnels that honeycombed the arena bowl, taking full advantage of the distraction provided in the arena. There, Anakin, Obi-Wan and Padmé were fighting for their lives. Just as all seemed lost, Mace Windu slipped into the Archduke's viewing box and confronted Count Dooku and the Separatist leaders. It is unfortunate that Mace Windu and the Jedi who came to Geonosis knew so little about the Petranaki arena. It had an



The Jedi sorely underestimated the strength of Count Dooku and the Separatist droid army. They paid dearly for that grave mistake.



Jedi Master Depa Billaba once pointed out to Mace Windu that if, instead of the rescue attempt, the arena had been bombed from orbit, the Clone Wars would never have happened.

The rise and fall of Jedi Master Coleman Trebor

"During the intense battle raging throughout the arena, Jedi Master Coleman Trebor launched an attack on the Archducal box, surprising even Count Dooku. Bounty hunter Jango Fett immediately interceded, his previous experience in fighting Jedi coming to the fore. Reacting faster even than the Count, Fett blasted Master Trebor off the balcony and the Jedi fell to his death on the bloody sands below."

ancient history of violence going back to the first Geonosian overlords who fought to the death there to prove their right to rule. In Poggle the Lesser's time, the Archduke used the arena to demonstrate the prowess of the battle droids the Stalgasin Hive foundries churned out.

A Desperate Struggle

Linking the arena to the factories was a long tunnel where automated transports brought loads of deactivated droids to be shown off to potential buyers. They stood silently, rank upon rank, in side rooms. They awaited only a single command. On Dooku's order, the droids advanced inexorably into the arena. Geonosian soldiers joined the battle. Windu was forced out into the arena under a hail of fire from unfamiliar B2 battle droids. The arena exploded with activity – a battle unlike any seen on Geonosis. The Jedi faced overwhelming odds in an unfamiliar location. Over everything hung the pall of the dark side. Though they fought valiantly, the Jedi were pushed back and back until, out of 212 would-be rescuers, only some 30 or so remained. They stood at bay in a fighting circle at the centre of the arena, ringed by droids. When Mace Windu refused to surrender, Dooku ordered the remaining Jedi to be destroyed.

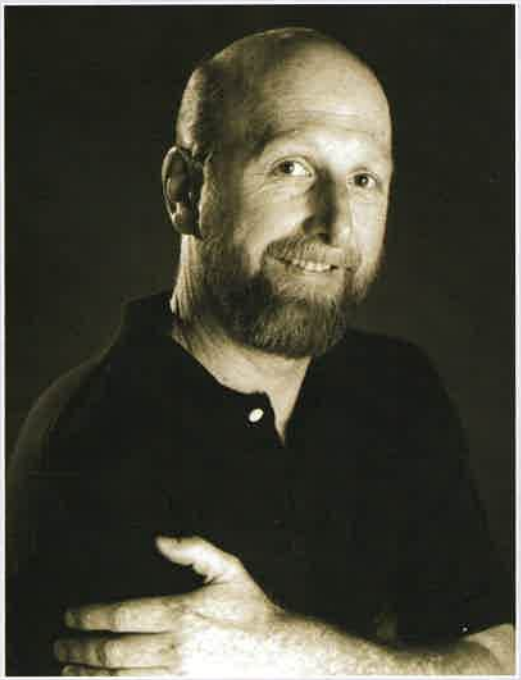
Deadly Aftermath

Though Grand Master Yoda and a clone army swooped to their rescue, carrying off the survivors even as the droids in the arena opened fire, just over 20 of the Jedi strike team that arrived on Geonosis left the planet. Dozens of Padawans, Jedi Knights and Jedi Masters all died that day – just a taste of what was to come.

STEVE GAWLEY

MODEL MAKER SUPREME

There are few people who have served both Empire and Rebel Alliance, and fewer still who have built starships for both. Only one man can also say that he had a car that helped destroy the first Death Star. Model maker Steve Gawley is that man.



Born in 1952, Steve began making models as a kid. While he was studying for his Bachelor of Science degree in Industrial Design at California State University in Long Beach, Joe Johnston recommended him to George Lucas for a job as a draftsman. As a result, Steve was one of the first 15 employees of what would become Industrial Light and Magic. As well as building a great many models for the first *Star Wars* film, Gawley also appeared as a Death Star trooper. He helped destroy his place of work, the Death Star, when he volunteered

Kerner Optical

From 2006, Steve worked for Kerner Optical which makes miniatures for films, such as *Transformers* and the fourth *Indiana Jones* film, and for commercial clients.

his pick-up truck to help film the trench run passes along the models of the station surface he'd helped make. Steve was with the ILM model shop for 31 years, until it was sold in 2006, and is one of very few individuals to have worked on all six *Star Wars* films. In 1987, ILM created the visual effects for the Star Tours amusement park ride. In one of the sequences that the audience experience, Gawley flies to their rescue as Red Leader.

Award Winning

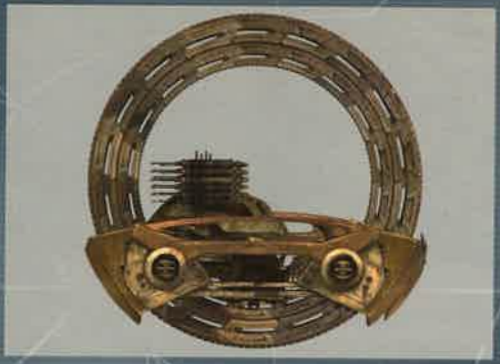
Steve Gawley has built models for many ILM projects, including at least 11 that have won Academy Awards. He himself was nominated for an Oscar for his work on *Back to the Future II,* and won a BAFTA for that film in the same year. In 2006 he won the Visual Effects Society Award for his work on Steven Spielberg's *War of the Worlds.*

THE HAILFIRE DROID

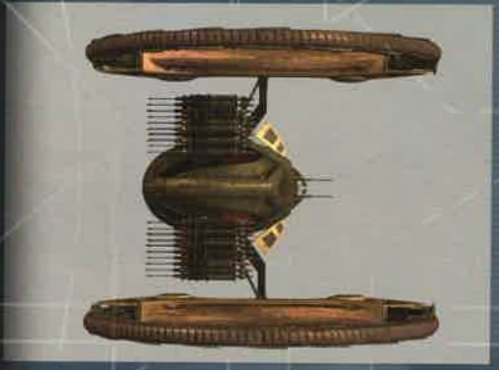
ROLLING OUT THE IG-227

CREATING THE HAILFIRE DROID

1 Hailfire droid tanks made their first appearance in the Battle of Geonosis in Episode II. Above: Rolling into combat alongside B1 battle droids.



2 The first battle of the Clone Wars was intense. To help show out who was shooting at what, the ILM Visual Effects team gave some visual clues.



5 Unshielded, the droid tanks were torn apart by fire from LAAT/i gunships on Geonosis. Above: top down view.

6 The Hailfire was retired from service as, once it fired all its missiles, it had to return to reload and was often destroyed while retreating.

Hailfire droids serving with Confederacy forces were repainted in CIS colours. As with all Separatist droid units, they were deactivated when Darth Vader executed the Separatist Council. However, the Wookiees used scavenged parts in their fight against Imperial occupation.

3 Rockets launched by Republic forces, such as the gunships, left white smoke in their wake. The smoke from Hailfire droid missiles is a dirty, smoggy black..

4 Each of the Hailfire's missile pods holds fifteen self-guiding missiles capable of hitting targets in the air or on the ground.

7 When Haor Chall Engineering introduced the flying refresh droids, the issue was solved. The Hailfires could now be quickly resupplied in combat.

8 General Grievous' wheel bike, built by a company owned by the IGBC, drew inspiration from the Hailfire droid, and used the same magpulse drive

1 What does Anakin tell the gunship pilot to aim for on the Techno-Union transports?

2 What department of the InterGalactic Banking Clan did the Hailfire droids work with?

3 Who played Aayla Secura?

ANSWERS:

1. Anakin said "Aim right above the fuel cells!" The results were immediate and explosive.

2. The Hailfire droids worked for the Collections and Security Division.

3. Aayla Secura first appeared in the Dark Horse *Star Wars* comics, and was played by Amy Allen. Allen, originally part of the ILM support staff on Episode II, also plays three other characters in *Attack of the Clones* (including twin sisters) and a Twi'lek senatorial aide added to the DVD version of Episode I.

P

Pablo-Jill

Character
Episode II

One of innumerable Jedi casualties during the Clone Wars, the loss of Ongree Jedi Master Pablo-Jill was particularly painful because of how much he had survived, how late in the war his death came, and how his body was desecrated afterwards. Having already achieved fame by bringing peace to Ord Mantell, Pablo-Jill was one of the 212 Jedi to accompany Mace Windu to Geonosis. Separated from his colleagues during the fighting, he nonetheless survived. He served as a Jedi General throughout the Clone Wars, and was on Coruscant when General Grievous attacked. Pablo-Jill and two colleagues took Jedi Interceptors and pursued General Grievous' shuttle after the kidnapping of Chancellor Palpatine. Only Jill and one other reached the *Invisible Hand*, and were drawn into the ship by a tractor beam. There, both Jedi fell to the merciless cyborg. Broadcasting from his flagship, General Grievous showed the Jedi Master's body being blasted into space.

Peko-peko

Creature
Episode I

A native to the swamps of Naboo, the peko-peko was a flying reptilian creature some three metres long. Powerful creatures, their skin secreted a unique compound that was extremely toxic to most other living things. It was discovered early in Naboo's history, however, that the blood of the peko-peko contained a compound that acted as an anti-venom for glie-based poisons. An important part of the Naboo ecosystem, they were relatively easy to domesticate, proving to be excellent mimics that could be taught to say amusing phrases by both Naboo and Gungan owners.

Pit droid

Droid
Episodes I, II

Manufactured by Serv-O-Droid, the DUM-series pit droids were cheap, short, spindly droids with remarkable strength for their frame. Single-minded in their duties, they could be programmed to repair pretty much any type of machinery. Their strength and speed made many owners wary of them malfunctioning, and retailers often advised keeping an ion gun on the premises just in case of a malfunction.

PK droid

Droid
Episode I

These basic worker droids were manufactured by Cybot Galactica. At around 1000 credits apiece new, the reliable little droids proliferated. They were even to be found aboard vessels of the Trade Federation. There were a number of variants, including a luxury version manufactured exclusively for the Naboo Royal House.
